

HOW TO USE OUR PELLETIZED BEDDING:

HORSE STALLS:

- STEP 1** - Place 5-6 unopened bags evenly spaced in clean stall (number of bags depends on stall size)
- STEP 2** - Cut the bags open down the center in an “X” design
- STEP 3** - Apply approximately 1 gallon of water per bag. This will start the expansion process
- STEP 4** - Wait about 15 minutes after applying the water. The pellets will expand to a nice soft, fluffy sawdust consistency which tells you they are ready to spread
- STEP 5** - After achieving optimal consistency, empty bags, spread evenly in stall and you're DONE!

SMALL ANIMALS:

- STEP 1** - Clean area and spread pelletized bedding evenly throughout
- STEP 2** - Product is ready to use
